DETAILED ACTION

Page 2

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 9-17 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 9-17 are directed to a computer implemented method for performing a calculations, the input are numbers and the output are also numbers. In order for a claimed invention that is directed to such a method to be statutory, the claims must limit the invention to a practical application. That is the claimed invention must transform an article or physical object to a different state or thing, or produce a useful, concrete and tangible result. See "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility", OG Notices: 22 November 2005. However, it is clear from 9-17 that claimed invention does not perform any physical transformation, and since the result of the invention are merely data in a frequency band without a practical application recited in the claims, it is not a useful, concrete and tangible result. Therefore, the claims fail to limit the invention to a practical applications, and thus are directed to non-statutory subject matter.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 10/604,169

Art Unit: 2193

1

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Balaban et al. (4,464,675).

Balaban et al. discloses in figures 1, 2a and 2b, a filter (20) for extracting a desired frequency band from an input signal including a shift register having a plurality of register (LI,TI1-TI227) coupled in cascade control by a synchronization clock (IFC), and an arithmetic subtracting unit having an inverter (72) and an adder (72) for obtaining a difference between an input data stored in the output end (TI227) and the input end (LI) of the shift register to form an output of the band pass filter; wherein the length of the shift register (LI+TI1 to TI227 = 228) is equal to the sum of 1 and an integer part f a ratio of a half of a signal sampling rate (IFC = 3.58 MHz, see col. 4, lines 64-65) of the input signal to a desired band pass frequency (15,734/2 Hz, see figure 12d and col. 12, lines 64-68) as claimed.

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuong D. Ngo whose telephone number is (571) 272-3731. The examiner can normally be reached on Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki can be reached on (571) 272-3719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2193

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
